and low molecular weight polyols by the addition of a butylene glycol or propylene glycol such as dibutylene glycol. U.S. Pat. No. 4,220,732 proposes to compatibilize the blend of polyol and glycol by utilizing as the glycol extender a combination of 1,4-butanediol and phenyldiethanolamine. U.S. Pat. No. 4,395,133 compatibilizes the polyol/glycol blend by employing as the polyol component a mixture of specific polyoxypropylene polyoxyethylene polyols of specific molecular weight and functionality. Other proposals involve the use of salts (potassium chloride or potassium acetate) or add a small amount of isocyanate for partial reaction and compatibilization of the blend.

(5) Despite such advances in the art, need for effectively stabilizing the polyol/glycol blend while improving the final urethane product still is a desire of the art.

(6) BROAD STATEMENT OF THE INVENTION

(7) The present invention is addressed to compatibilizing an incompatible blend of a long chain polyol, such as a long chain polyoxyalkylene polyol, and short chain diol, such as a glycol. Such method comprises incorporating into the blend a stabilizing amount of an esterol containing polymerizable ethylenic unsaturation. Desirably, the hydroxyl functionality and ethylenic unsaturation of the esterol both are pendant.

(8) Another aspect of the present invention is the resulting compatibilized
